

SYMPTOMS MAY INCLUDE:

- Breathlessness (especially after physical exertion)
- Persistent cough
- Fatigue
- Wheezing
- Difficulty breathing which worsens over time

TREATMENT OPTIONS:

There is no cure for COPD. Managing symptoms to improve quality of life and reduce risks of complications slow the progression of health issues.

COPD

is Chronic Obstructive Pulmonary Disease. COPD is a group of lung diseases that block airflow and make it difficult to breathe. This is the umbrella term for chronic lung conditions, of which smoking is the most common cause.
